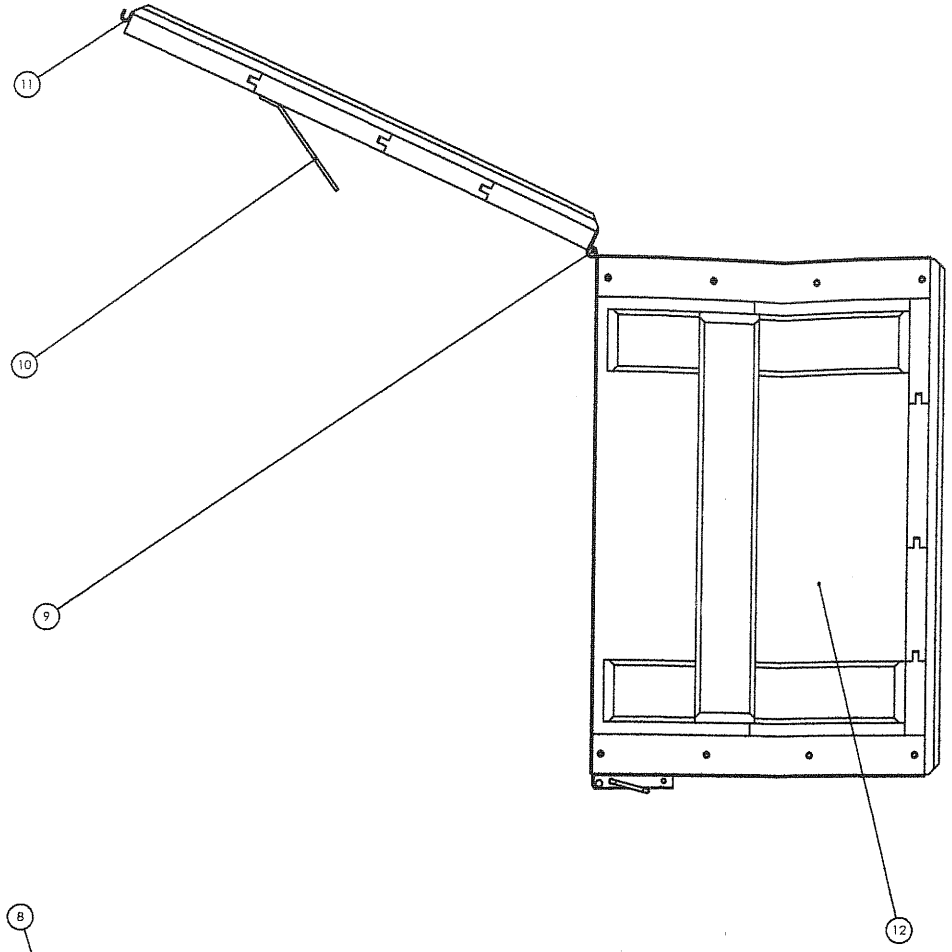
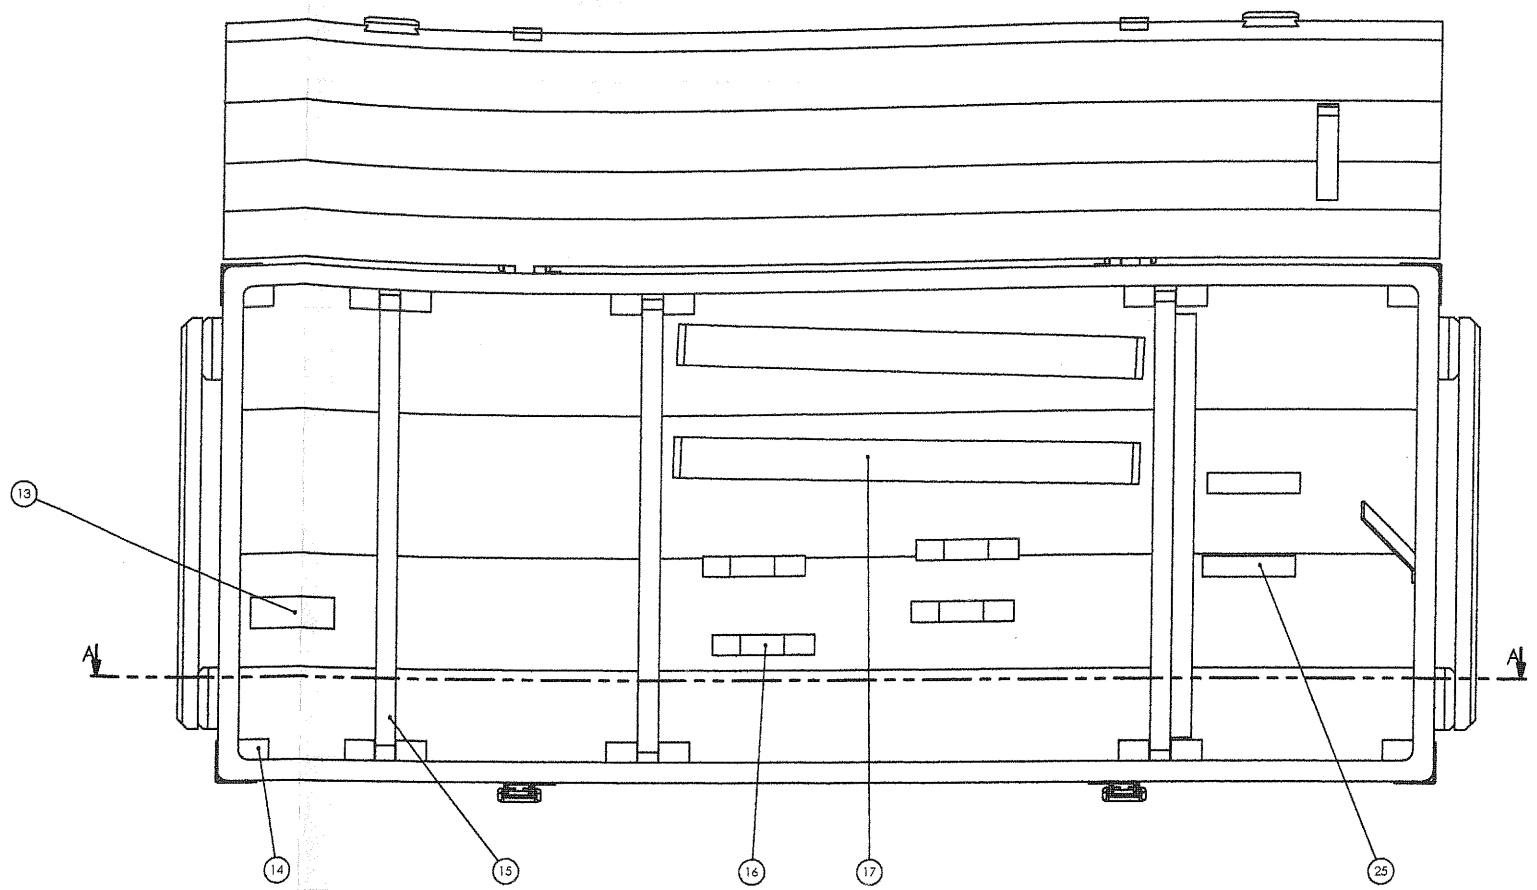
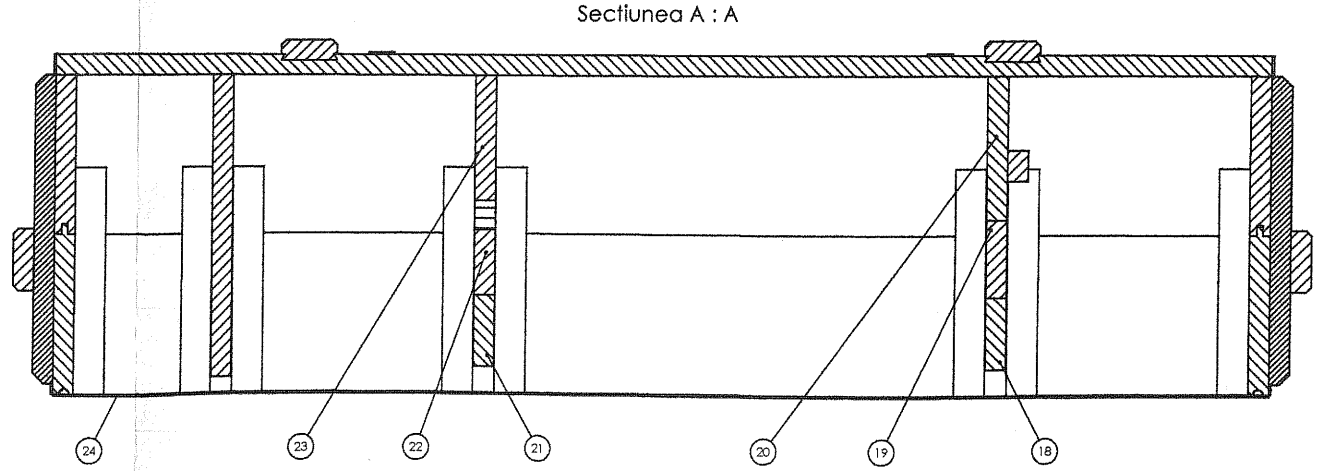
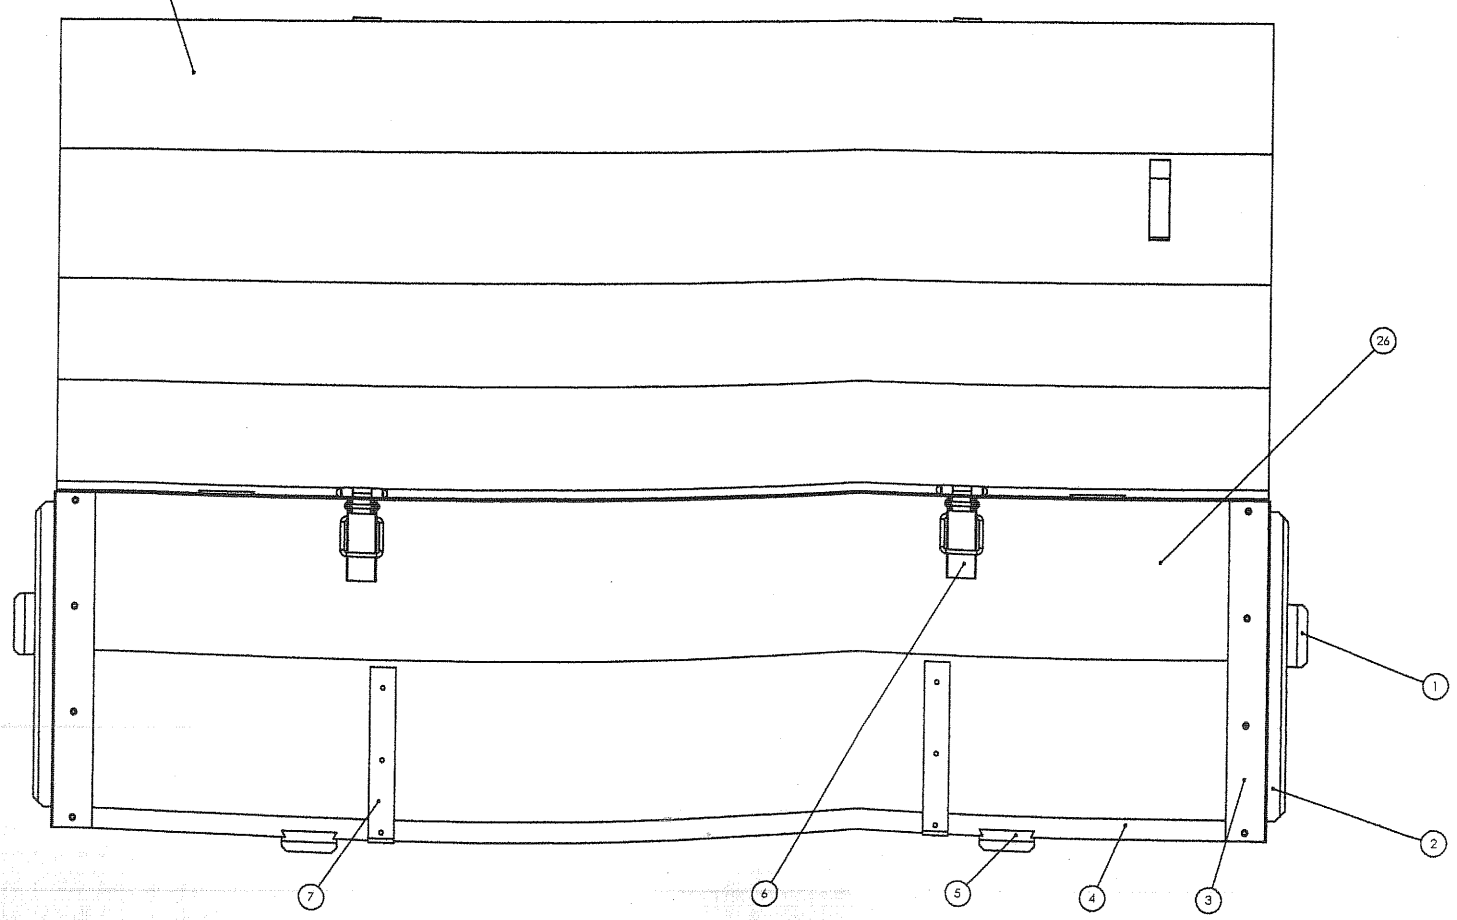
NECLASIFICAT





Sectiunea A : A





Nota :

1. Indoirea cuielor se face perpendicular pe directia fibrelor de lemn, pana la nivelul suprafetei, prin batere cu clocanul
2. Peretii acoperiti de capac se echipeaza cu banda de cauciuc celular, fara strat compact pentru etansari : 5x15 STAS 7413-75
3. Lada la interior se captuseste cu hartie parafinata, inclusiv capacul dupa ce au fost montate holsuruburi sau cuie
4. Lada la exterior se vopseste in culoarea kaki
5. Se foloseste cherestea de rasinoase STAS 1449-86 ; Scandura cls. B, tratata in vederea respectarii cerintelor fitosanitare conform ISPM15.
6. Umiditatea lemnului trebuie sa fie de maxim 18 %
7. Dimensiunea scandurii la exterior minim 80 mm. Dimensiunea scandurii la interior minim 60 mm
8. Suprafetele de scandura cu imperfectiuni la aspect, inainte de vopsire se vor chitui si lustrui
9. Pozitiile 13, 16, 17, 25 nu se monteaza pe lada, dar se vor distribui.
